

## **Pure Climbing sums up how we think, how we feel and how we climb.**

This ethos is felt by every climber who uses our equipment. Climbing is their passion, and every route they venture on is an expression of it. Because like us they are not prepared to compromise.

In everything we do, and everything we create, and everywhere we climb; our ambition, energy and expertise drive us on. We're always pushing the limits of what is possible. And out of this attitude our products are created –

**Pure Climbing Equipment.**

## FRIENDS

# 'Have you got the bag of 'friends' Ray?' the name stuck...

Friends are the most iconic protection ever made. Throughout their 38 year tenure, although the construction has changed, their essence remains the same. At the heart of each iteration has been the definitive 13.75° cam angle; described, refined and developed by Wild Country and proven in thousands of miles of cracks climbed since 1977!

This new Friend is no different, built with a twin axle it remains a Friend. At its core our 13.75° constant cam angle provides the axis around which future climbers will place their trust. Robust and reliable this Friend combines classic features and significant additions to create an intriguing mix of old and new.

Externally, stylish with significant design flourishes mean the eye is drawn to any number of clever upgrades: hollow axles are stiffer for less weight; wide, skimmed lobes grip better yet are kinder on the rock; new 12mm dyneema is agile and easily extended, saving time and the weight of having to use a quickdraw on each.

Internals are based on classic Wild Country foundations; our legendary holding power and the consistency of overlap between units, whilst the twin axle has allowed us to increase the range per unit.

## Never defined by how it is built, but by how it performs, the Friend's iconic status is simply enhanced by this twin axle version.

Crucially, this is design at its most practical making the new Friend the only twin axle cam that combines the convenience and comfort of a thumbloop with the speed and utility of an extendable sling.

Faster, smoother, lighter in use and superbly finished; our clever combination of key features with innovative engineering makes the new Friend the most complete cam available.

# ROCKS

The Rock with its curved sides is a Wild Country original and revolutionised how we protect routes. Still the backbone of any good rack, the current incarnation is considerably more advanced than its predecessor and significantly lighter as well. Keeping the original groundbreaking curve, Rocks now come with thinner, lighter sidewalls, a lateral side taper, anodised heads for quick selection and an extended range – with fourteen sizes in all. Revolutionary when launched and still turning heads, the fully featured Rocks range are the benchmark units for the modern climber.

## SUPERLIGHT OFFSET ROCKS

Less is more. Subtle, superlight and secure, Superlight Offset Rocks are by far the lightest passive pro per size in the world. Simple, yet incredibly effective, they combine the proven curve of Rocks with a radical side taper that adds a new dimension to protection. Intuitive and easy to place, they're perfect for trimming a rack without cutting down options. An instant classic, and a big hit with our testers, all that's missing from these slimline superstars is weight.

## SUPERLIGHT ROCKS

Superlight Rocks are essential gear for anyone wanting to climb lighter and faster without compromise. Slim, light, flexible, and supremely agile in tight spots, these single wired beauties push all the buttons as the perfect tool to complete any serious rack. In six sizes, with curved and tapered sides, they give any rack more bite for very, very little weight.

## PROTON

The new Proton is sports specific and impeccably designed to enhance the all-important clipping moment. Distinct hot forged back and gates have been carefully thought out to create an ergonomic pair of 'biners engineered around our new variable width webbing to make an awesome package. Deep internals locate both the bolt and rope in the most effective and efficient way, producing a clean hanging draw that's perfectly balanced. Quickdraws available in 12, 17 and 25cm on variable width webbing with 'Vice'.

## ASTRO

The Astro retains many of the features that run through the Helium concept, creating a 'biner that's exceptionally strong, compact and lightweight. Importantly, the Astro retains a practical size and an overriding ability to be used in all circumstances, which is an essential part of karabiner design that is sometimes forgotten in the race to shed weight. Quickdraws available in 10, 15 and 20cm on 10mm Dyneema with 'Vice'.

## HELIUM

The definitive trad climbing 'biner of the last ten years, and with a clutch of five star reviews that say as much, the latest Helium is incrementally improved for this season. A new 2mm wiregate enhances the ease of use; improving clipping and adding even more security to our 'Clean-wire' (Patented) nose wiregate. As strong and light as ever, due to Wild Country's ground breaking 'I beam' back construction, the Helium stays as relevant, reliable and as perfect for the on-sight as any 'biner ever has been. Quickdraws available in 10, 15 and 20cm on 10mm Dyneema with 'Vice'.

# WILDWIRE

Sleeker, slimmer, lighter, stronger; Wild Country's best-selling wiregate gets a makeover. Trimmed of any excess it has been remodelled with our 'I beam' back, a new 2mm wiregate and a leaner profile. A superb, lightweight unit, the new Wild Wire will remain a definitive design and the mainstay of climber's racks. Quickdraws available in 10, 15 and 20cm on 12mm Dyneema with 'Vice'.

## HYBRID SPORT DRAW

This superb sport climbing combination features a burly bolt end 'biner complemented by a lightweight and swift clipping wiregate. The new Electron provides the clip end and has a straight gate for security and a no-hook nose for stripping while the lithe new Wildwire makes for a very smooth clip even in 'extremis'. Our wide, proven vari-width tape is easy to grab when needed and the 'Vice' keeps the bolt end 'biner correctly orientated. In three lengths 12cm, 17cm and 25cm. Packs of 12cm are also available.

## HARNESSES

# The new V-Flex™ design combines comfort with efficiency.

Innovative and inspired, the radical new design of this all-new harness range offers a precision fit previously unattainable. An original concept, Wild Country's new system is anchored in our V-Flex™ belt. A unique construction, it integrates variable-width webbing, our 'Dura-Weave' mesh and a distinctive new shape. Articulated, ergonomic and flared to better mimic the body's curves, our V-Flex™ belt maps, wraps and contours very effectively. Combined with the increased flexibility of the 'Dura-Weave' mesh it makes an incredibly efficient way to spread loads more evenly. This reduces pressure points and enhances comfort; much more so than a flat, rigid, foam construction. A totally new approach to fit, our aim is to produce the best harness - the one you don't realise you are wearing – and these new concepts take us one step closer.

### Design features

- Unique V-Flex™ belt
- 'Dura-Weave' mesh construction
- Ziplock 3D buckles
- Adjustable elasticated leg loops
- 22kN 16mm belay loop
- 16mm waist webbing
- 12mm leg loop webbing
- 6 gear loops
- Two accessory loops (fit ice screw holders)
- Haul/gear rear loop

### Harness Bag

Everything we make is without compromise and so when we created our new harness bags we went back to square one and looked at what people would find useful. So we envisioned a small haul bag big enough and tough enough to carry a 2 litre water bottle, food and water proofs but stylish enough to contain our fantastic new harnesses. We think you will come to value this well thought out mini haul bag.

## MISSION MEN'S

The Mission men's is a new reference in comfort and control. A truly remarkable fit, it is designed around our unique new V-Flex™ belt and 'Dura-Weave' mesh construction. Supple and supportive, loads are spread more evenly reducing pressure and increasing hang-time. Body-hugging and extremely breathable, it'll let you climb longer with less fatigue. Ergonomic and articulated, this is an adaptable multi-purpose model that's finished with a host of neat features: All new Ziplock 3D buckles are slick yet secure; new 16 and 12mm webbings are lighter and less bulky; 'Dura-Weave' fabric is highly wear resistant; five spacious, new, integrated gear loops make racking a joy while accessory loops take ice screw holders and there's a haul loop. Stylishly finished in subtle new colorways this is a benchmark all-rounder that perfectly melds fit and function.

## MISSION WOMEN'S

Clean and close-fitting, the Mission women's unique new V-Flex™ belt delivers unprecedented comfort and support. Ergonomic and articulated, our new construction delivers a figure-hugging fit like no other. Tuned by our female athletes it also features a different ratio between legs and waist and a longer rise. Light, flexible and breathable you'll climb longer with less fatigue. A genuine, cross-season performer it's beautifully finished with well thought out features: All new Ziplock 3D buckles; new 16 and 12mm webbings; Hi-tenacity 'Dura-Weave' fabric; five spacious, new, integrated gear loops; twin accessory loops and a haul loop. In sophisticated colourways and with subtle branding this is a perfect choice for the action woman all-rounder.

## MISSION SPORT

The Mission sport feels connected and confidence inspiring. Designed around our new figure-hugging V-Flex™ belt it has maximum agility with minimum bulk. Slim articulated and flexible there's a freedom of movement that's essential for modern '3D' super-sport routes. Lean, flexible and with a high-quality fully-featured finish this is a brilliant sport climbing tool.

## SYNCRO

A classic concept the Syncro four buckle is a valuable part of our range. Twin central buckles are quick to adjust, allow a bigger range per size and keep gear loops where you want them. This new version, designed around our unique new, load-spreading, V-Flex™ belt, is more comfortable and secure than ever. Keeping you fresher for longer, by spreading loads to reducing pressure points, it's the perfect partner for big walls, guiding or long days cragging. Fully featured, including new 7 integrated gear racks, this remains a true workhorse.

## NEW REVO

# The REVO is the first Bi-Directional assisted locking belay device

Its function is independent from the loading orientation of the rope, thus eliminating one of the most common causes of belay related accidents. Irrespective of the situation, an uncontrolled descent will cause the inertia reel to activate, grip the rope and arrest the fall.

The innovative panic-proof locking mechanism (pat. pending) removes the necessity for a handle to unlock the system when lowering the climber. The device is intuitive to use like a traditional belay plate and is thus suited for both the novice and expert alike.

The clever combination of these features makes the Revo the safest belay device on the market.

## Design features

The only automatically locking belay device which:

Has a completely panic-proof locking mechanism. The Revo has no method of over-riding the locking mechanism, during belaying, or when lowering a climber.

Is bi-directional, the locking function works regardless of the rope orientation.

Has an intuitive belaying method, which requires no changes to standard belaying technique.

Has no need for a specific locking karabiner.

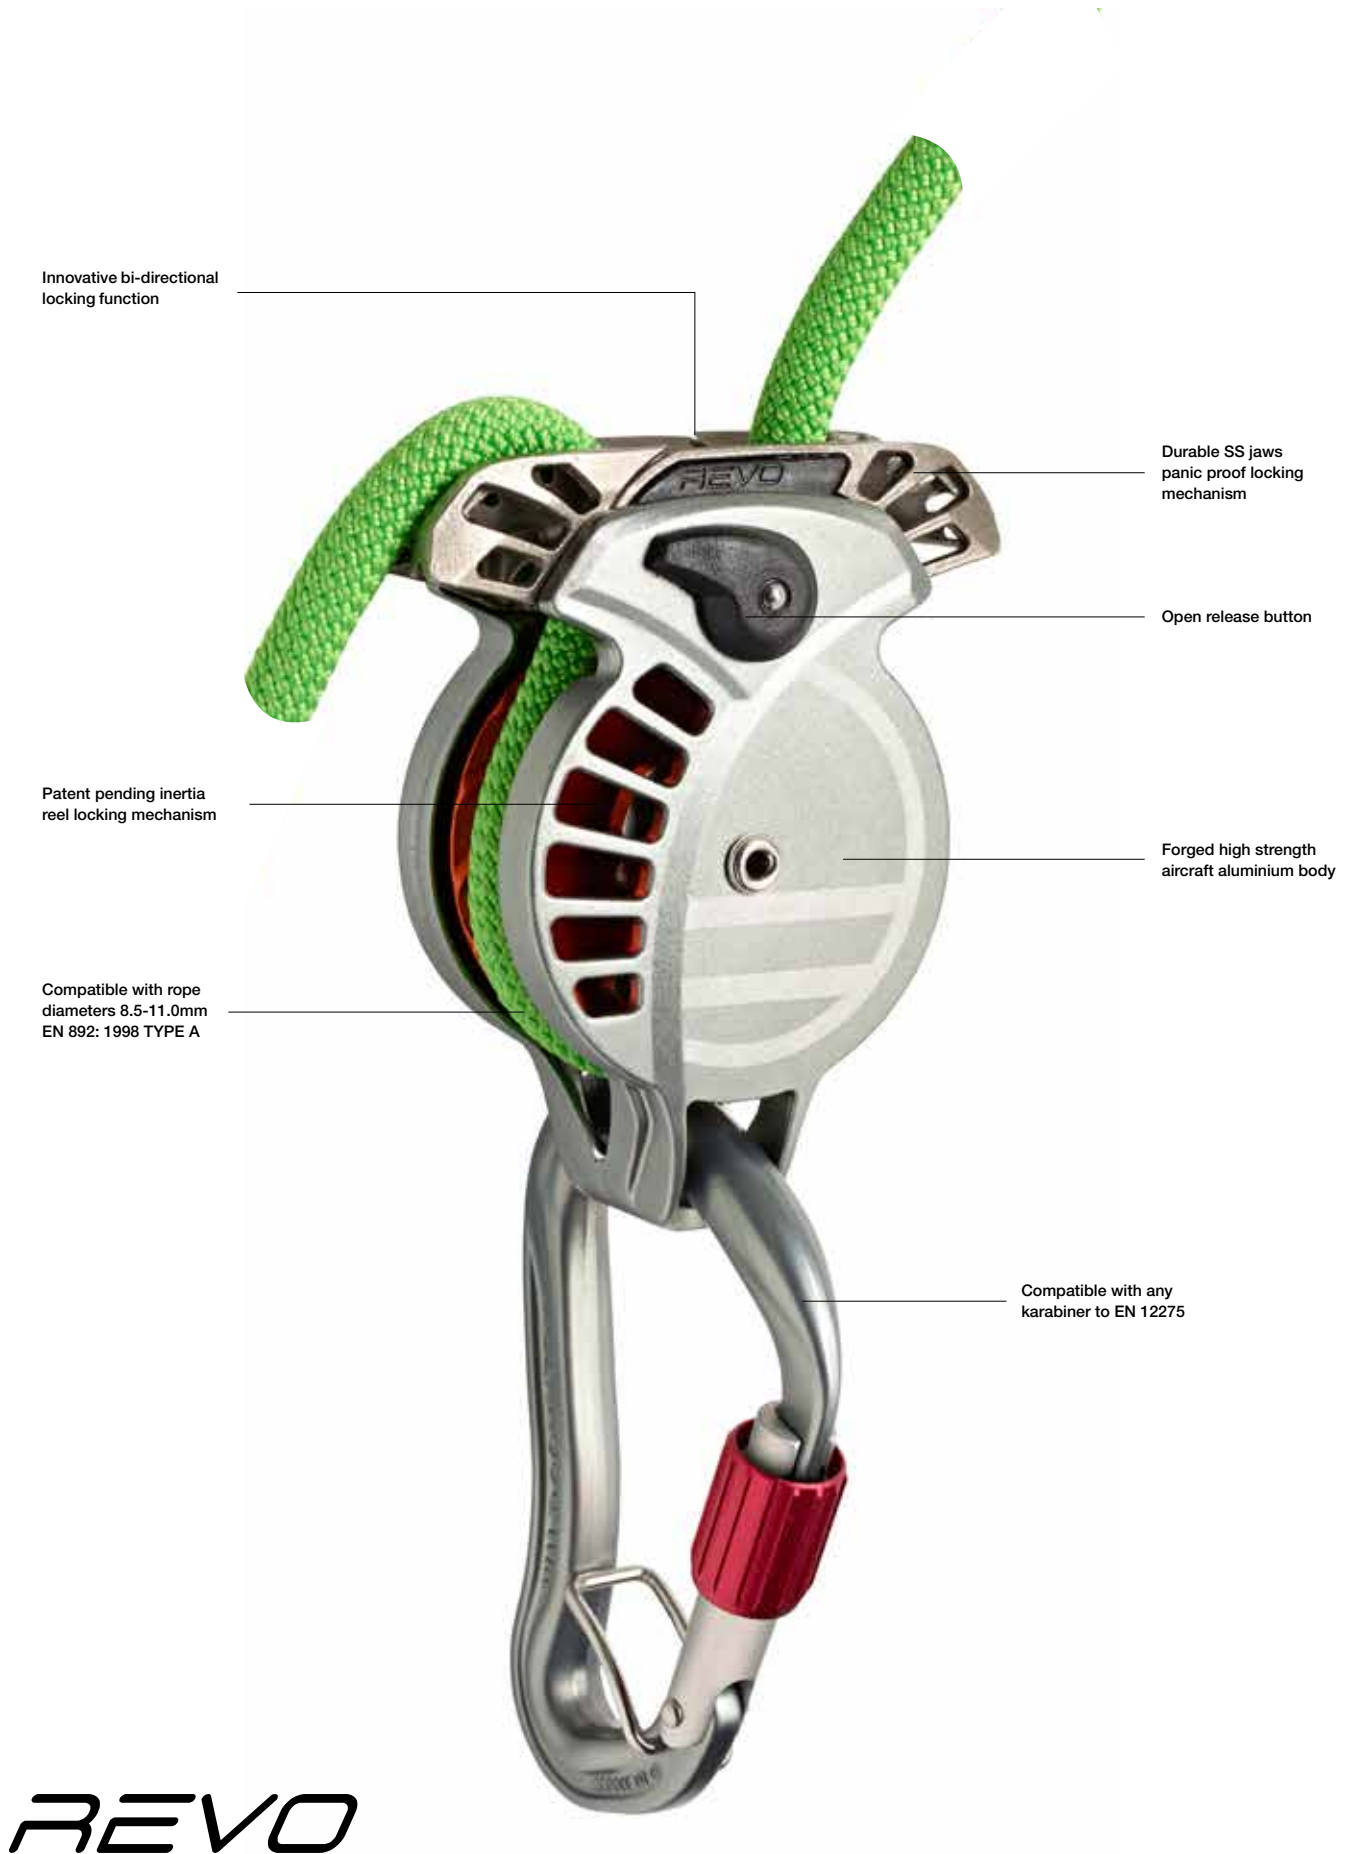

All of these USP's contribute to make the Revo the safest belay device available.

# PRO GUIDE LITE

Our new advanced belay tool demonstrates engineering excellence. This remarkably lightweight device has been trimmed of all excess. Its deep ribbed grooves handle a vast range of ropes from 7.7mm alpine cords upwards. Operated in 'guide mode', the Pro Guide Lite is perfect for bringing up twin followers and locks perfectly with every fall. With a larger 'release slot', suitable for a karabiner, the tool is simple to release under load. For use in mountain and crag environments by alpinists and adventure climbers, the Pro Guide Lite is ergonomic, smooth and simple to operate.

# PRO LITE

Light, intuitive and smooth running, the Pro Lite is simple, secure and efficient. Revised internals and wide deep V grooves give control across a wide range of ropes and a flat base plate reduces grab when rope is needed quickly. Working equally well belaying or abseiling the Pro Lite is a superb value for money option for the all-round climber.

# ROPEMAN 1

The original Ropeman has been a bestseller for over 10 years and is a benchmark mountain product. The Ropeman 1 has an alloy cam that keeps weight down. It is easy to place on ropes with a simple action to open the sprung sideplates. The flat cam profile is easy to release, even under light loads. The Ropeman 1 has recently been upgraded with forged sideplates for increased strength, less weight and an even better fit. Ideal for self rescue, prussiking, pulleys and mouflage, the list of uses for these small but perfectly formed devices is endless.

# ROPEMAN 2

Built with a stainless steel cam, the Ropeman 2 works with a wide range of rope diameters and has become 'standard issue' for many mountaineering and crag activities. Recent upgrades include forged sideplates, making the product lighter and providing a better internal radius for smooth operation across a broader range of karabiners. From self-rescue and cliff rescue to mouflage and more, these mini-marvels have been well proven in the field.

# Helmets

# FUSION

The new hard shell Fusion helmet combines a strong polypropylene outer with an EPS layer, attached by simple mechanical joints. This new system provides greater flexibility between layers, making the model less susceptible to damage. Simple adjustment through the 'Quik-Clik' dial fine-tunes the two available sizes for a perfect fit. Additional comfort is provided through a removable and washable lining. A small brim adds additional coverage for ice and rock fall. Strong, slick and well vented, the Fusion helmet is great allrounder for mountain or rock action.

## Design features

- Hardshell helmet with polyprop outer and EPS inner
- 'Quik-Clik' dial for quick one handed adjustment
- 4 large headtorch clips
- Brim for added face protection
- Removable and washable comfort lining

## PRO KEY

Adaptable and easy to use, this slick nut tool is well thought out. Thin and accurate, the tip of the Pro Key is precision ground for nut removal even in tiny slots; whilst at the opposite end there's a wide, flat surface for a firm and painless push with the palm. Large holes along the length of the key keep weight to a minimum and a wire gate allows a direct clip to the harness.

THE THREE SIGMA RATING system is a method of Statistical Quality Control (SQC) which we use to describe, analyse, and control the rated strengths of our products. For each batch produced, a statistically representative sample is taken and tested to destruction in accordance with the relevant European Standard for that product and/or our own approved internal Quality Assurance Procedures.

These procedures are an integral part of our Quality Assurance System. From the data obtained from destruction testing, the average (or mean) and sample standard deviation (which is a measure of variance based upon the results obtained) is calculated.  $3\sigma$  is three times the sample standard deviation. When  $3\sigma$  is deducted from the mean result obtained, we can predict the spread of results which would be obtained if we were to destroy the entire batch (which is why we sample only!). We monitor this data closely from batch to batch to ensure that the rated strength (as marked on the product) is always less than the mean minus three times the sample standard deviation. This ensures that the minimum breaking strength for all products is consistently higher than the rated strength as marked on the product.

UIAA SAFETY LABEL – The UIAA Safety Label can be awarded for mountaineering and climbing equipment that meets the requirements of the relevant UIAA standard. In order to prevent unnecessary multiplicity of standards, the UIAA standards are based on the European standards (EN standards, also called CEN standards). The EN standards, in turn, are based on the former UIAA standards, which were the first standards for mountaineering and climbing equipment in the world. The present UIAA standards may have higher and/or additional requirements above those in the EN standards.

CE CERTIFICATION – Where required by law (European Union Directive 89/686/EEC – for Personal Protective Equipment).

WARNING – In accordance with EU Directive 89/686/EC Wild Country Ltd. supplies detailed instructions with all its products and recommends that the user reads and understands these instructions before use. If you are in doubt, require further advice or would like a copy of the instructions for any Wild Country product, you should contact us at the address printed in this Work Book. It is the user's responsibility at all times to ensure that he or she understands the correct and safe use of any equipment supplied by Wild Country Ltd., uses it only for the purposes for which it is designed and practises all proper safety procedures. The manufacturer or supplier will not accept any responsibility for damage, injury or death resulting from misuse.

GUARANTEES – Wild Country guarantees all of its products from new against defects in workmanship or materials, unless the product has been worn out, misused, or abused, as determined by our examination. Wild Country will repair or replace any product as appropriate. This guarantee is in addition to your statutory rights which remain unaffected. Wild Country Ltd. reserves the right to modify without notice the design and specifications of products described in this workbook. All weights, dimensions & sizing specifications where quoted are nominal.
